

Optimize your telematics solution ... Maximize your return on investment

So you have invested in a GPS based telematics solution, now what ?

GPS solutions are great for tracking your vehicles and assets. Know where they are in real time, receive alerts in unusual circumstances such as theft or unauthorized usage.

The newly mandated requirements of having many types of vehicles equipped with electronic on board recorders (ELD and DVIR) is a great improvement for the safety and well being of all.

But did you know that telematics solutions can change your company dramatically and when implemented correctly can not only pay for themselves but increase your company's profitability substantially ?

Unfortunately, for a variety of reasons, many companies do not take advantage of their full potential and GPS tracking devices become more of an expense rather than an "investment" . Over worked staff members, turn over, complacency and lack of training are only a few factors in whether your solutions are optimized.

Since 1999, TekniREP Services has been helping companies like yours analyze their needs, review internal resources, budget accordingly, select the right product, arrange installation, provide ongoing training to stay on track and take the solutions to the next level.

Specializing in turn-key project management we can recommend, aid in the selection, implement and train our customers on a wide variety of on-board vehicle technologies as well as service your needs "post-project" for service, repairs, supplier support and ROI analytics.
